Consent details (to keep)

By signing this consent form, I give my consent for Chorus and its approved contractors to access my property and use any existing poles or other fixtures thereon (if necessary) to install and maintain fibre optic cables and related UFB network equipment, and to apply for and work in accordance with the conditions of any necessary consents required under the Resource Management Act 1991 or Heritage New Zealand Pouhere Taonga Act 2014.

Chorus also has consent to access the same network for repair and/or removal from time to time in the future. This consent shall continue whilst such equipment remains at my property.

I acknowledge that Chorus has continuing ownership of the network or equipment they install and agree that it must not be worked on or interfered with without Chorus' prior consent.

If another entity takes over responsibility for installing the UFB network, then my consent and its terms will apply to that new entity.

Chorus may exercise rights as my licensee (for the purposes of the Land Transfer Regulations 2002) in respect of any existing telecommunications easements granted in favour of me or my property.

We agree that this consent shall be deemed to be notice pursuant to section 135 of the Telecommunications Act and contains all applicable conditions between us where Chorus is installing UFB fibre in a "road" (as defined under that Act) on my property.

Chorus will ensure that all works are carried out with the following principles and in accordance with legal requirements and industry standards:

- Chorus will take into consideration any reasonable directions I give before work starts, so long as I have given advanced notice.
- The team on site will maintain all industry safety standards and conduct themselves professionally at all times.
- Chorus will work to minimise disruptions wherever possible, providing advance notice of any parking or access restrictions.
- When works are complete, Chorus will leave all work areas in a neat and tidy state.

Chorus' Liability: In the unlikely event that Chorus or its approved contractor damages any of my property while undertaking these works, they will pay the reasonable cost of repair up to a \$500,000 maximum total. I agree to use my best endeavours to provide Chorus with details of any claim within one month after becoming aware of any such damage. I will not pursue any of Chorus' contractors or agents for any claim directly.

Signed on behalf of Chorus by

Ed Beattie, General Manager, Infrastructure

RIGHT OF WAY

Ultra-fast broadband property consent

Chorus is laying thousands of kilometres of fibre optic cable to bring ultra-fast broadband (UFB) within reach of more than 830,000 homes and businesses across New Zealand.

For those living or working in shared driveways, we have some additional work to carry out to bring fibre to the properties – and we need your consent to carry out this work.

The benefits of UFB

With UFB, everyone in your home or business can simultaneously enjoy internet services working as they should – from quick downloads of video content to enhanced online services or reliable high bandwidth business applications.

Seeking your consent

Before Chorus can connect people in your right of way to our fibre network we need your consent to access the property to assess, install and maintain fibre optic cables and related equipment.

Work will only start once we have all required consents from the owners of the common/shared property, including yours.

What you might see

Based on how your right of way is currently connected, we'll use one or a combination of the following low-impact methods to install fibre:

- 1 If there's an existing aerial cable, we'll install the fibre cable in the same way.
- 2 If there's an existing underground pipe and it's usable, we will pull the fibre cable through this pipe.

If there's no existing aerial cable or usable underground pipe, we'll choose to either:

- 3 Bury the fibre cable in a soft surface such as grass or garden, or
- 4 Mount the fibre cable to a suitable surface such as a driveway edge, footpath, curbing, retaining wall or fence.
- 5 If none of the above methods are available and there's hard surface such as concrete, we'll need to use a high-impact method. We'll drill or dig a trench with machinery and bury the fibre cable. We'll aim for the most direct route, taking into account other utilities and ground features.

Digging may be required for some of the installation methods. We aim to minimise disruption and will reinstate any surface we've disturbed on a "like for like" basis, for example concrete where there was concrete or grass where there was grass. We can't guarantee to match surface finish or colour, though, and our reinstatement is limited to the surface we've disturbed.

For more info and photos of what these methods look like, visit www.chorus.co.nz/row

Wanting to order ultra-fast broadband for your home or business?

Check with your current broadband provider to see if they have UFB services available or see www.chorus.co.nz/getting-ufb for a list of our UFB service providers.

Please complete and return the attached consent, or complete and submit the online form at www.chorus.co.nz/row

As the authorised property, body corporate manager or joint owner, I give my consent for Chorus and its approved contractors to access my property and use any existing poles or other fixtures thereon (if necessary) to install and maintain fibre optic cables and related UFB network equipment, as outlined on the reverse of this leaflet. This consent shall continue whilst such equipment remains at my property.

Chorus also has consent to access the same network for repair and/or removal from time to time in the future.

I acknowledge that Chorus has continuing ownership of the network or equipment they install and agree that it must not be worked on or interfered with without Chorus' prior consent.

If another entity takes over responsibility for installing the UFB network, then my consent and its terms will apply to that new entity.
